---

Thank you for choosing our exhaust system. Here are some helpful tips and care for your new exhaust system.

- A little anti-seize between the slip connectors will prevent sticking.
- Take time when installing your exhaust. Make sure nothing rubs or bins. Loosen the head pipe and relax it, then snug up fasteners. After warm up, tighten all fasteners.
- If needed you could attempt some jetting for maximum performance. Call or visit [www.fourstrokeworks.com](http://www.fourstrokeworks.com) for more information regarding our jetting products.
- Please no harsh chemical on pipe. It may stain the finish. Wipe it down with WD40.
- The muffler comes packed and ready for use. It must be repacked as needed for perfect performance and longer life. This is a competition part and competition part do require more attention.
- Use light anti-seize or grease on the end cap fasteners, no loc-tite.
- The end cap comes right off with a  $\frac{5}{32}$ " allen wrench and remove spigot with  $\frac{1}{8}$ " allen wrench. Clean screen with a wire brush gently and blow off with compressed air.

Remember this is a competition part. No Warranties unless authorized by
